

## DAS Verification and Commissioning

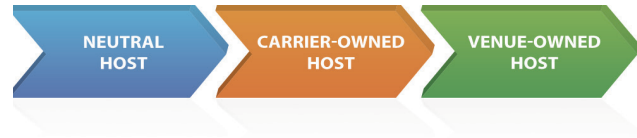

Distributed Antenna Systems (DAS) is an effective and common method for boosting wireless network capacity.

### DAS Applications

### DAS Deployment Models

There are three business models for DAS deployment. Each strategy has unique advantages and challenges. And each requires significant investment.

### DAS Challenges

DAS is a proven design technique to enhance networks and improve customer experience. While effective, DAS installations by nature are complex network environments. They require detailed testing to be verified and commissioned with full confidence.

### DAS Expertise

PCTEL's engineers are certified on numerous DAS OEM vendor platforms. We have a thorough understanding of each type of DAS deployment model for multiple operators and multiple technologies, including LTE-MIMO configurations. PCTEL engineers are proficient in completing system verification and commissioning processes as outlined by Tier1 wireless carriers.

Rely on PCTEL's engineering services for professional [DAS verification and commissioning](#), a critical step in the network testing lifecycle to ensure maximum return on investment for your network.
