

EXflex™ Pay Per Use Metered Licensing System

PCTEL's innovative Pay-Per-Use (PPU) model is now exclusively available for the SeeGull® EXflex. This model gives customers an opportunity to pay solely for actual use as an alternative to traditional capital expenditures or inefficient rental programs. Our PPU option helps operators meet project budgets without sacrificing access to best-in-class tools that are critical to execute network design, testing, and optimization. The highly-configured EXflex is purchased at a discounted price and customers only pay for actual usage time.

The PPU model is a metered licensing system in which usage days are purchased, managed, allocated, and tracked in PCTEL's free online management application. The platform is customizable, allowing operators to administrate on company, team, and individual levels. Real-time approvals for added usage days can be executed at a moment's notice, even in the field. This avoids work delays and prevents overpaying for unnecessary usage time.

CAPEX Control

Purchase the EXflex at a discounted price to **reduce upfront capital expenditures**.

Efficient OPEX Utilization

Effective planning can result in **efficient operational expenditure utilization** when cost is solely based on usage. Accurately prepare and monitor budgets by purchasing more usage days to match project demands.

Increased Flexibility

Adapt to shifting requirements with **software definable, field-upgradeable bands and technologies** with a highly-configured EXflex.

Web-based Application

Access an intuitive program that allows **complete scanner management** provided by PCTEL at no additional cost. Login online to view reports and control usage days. Assign personnel authority levels and team groups. Allocate tasks and project goals.

Tax Benefits

Lower purchase price may **decrease expenses on sales tax and import fees***.

**Varies by country.*

Future Upgrades

Keep current on equipment with the ability to **upgrade to a new PPU EXflex** after completing a term of use.
